High Performance HPLC Columns A New Platform for HPLC and Prep

Adamas[®]

SepaChrom

Choosing the Right HPLC Column

Choosing the right column for your application is very important and can be a difficult exercise. However following some simple steps will help you to make the correct choice and positively impact your chromatographic results. Here are some tips :

1. Set Your Separation Goals.

Do you need **High Resolution** or **Maximum Sensitivity**? And is our **Analysis** Time crucial? These are the main questions an HPLC user should consider in the development of a method. You also need to determine whether long column life, low operating cost, or other factors are important.

2. Packing Material.

The choice of the most appropriate media depends on the nature of your compounds and on your goals. The **Right Selectivity** of your packing to obtain a good separation in a relatively short analysis time is the base on which to select the media.

3. Column Format.

Analytical, Semi-Prep or Prep format choice depends on your application and your goals. Inner Diameter and Length will also impact the result of your separation.

Base Material

Polymer-based media such as Polystyrene DVB or Methacrylate offer higher pH stability (pH 1-14) than Silica-based material, so columns packed with these packings can be thoroughly cleaned with strong acids or bases.

However these packings are compressible and may shrink or swell with certain solvents, and they do not offer the same resolution when compared to Silica-based packings.

Silica-based media are physically much stronger and will not shrink or swell. They offer higher resolution and provide sharper peaks compared to Polymer-based material. Silica-based media are also available with a wide range of bonded phases to ensure the widest selectivity for almost any application.

Silica-Based media are compatible with a broad range of polar and non-polar mobile phases and they can be stable to a wide pH range.

Particle Shape

Silica-based media particles can be **Irregular, Spheroidal** or **Spherical** in shape.

Most modern HPLC packings are spherical. A **Spherical** shape particle offers lower back pressure, much higher performance, stability and reproducibility than irregular particles.

Irregular particles have a larger surface area, higher loadability and they are relatively less expensive. These are the reasons why they are still commonly used in prep and process scale purifications.

Spherical

Irregular

Particle Size

Smaller particle sizes give **Higher Efficiency and Resolution** than larger particle sizes but create higher back-pressure.

Larger particle sizes offer faster flow rates and lower back-pressure.

In analytical applications the typical particle sizes range is from 1.5µm to 10µm diameter, however most of the applications are performed with **3µm and 5µm**, which represent the best compromise between efficiency and back-pressure.

In Preparative applications larger particle sizes are commonly used (10µm to 30µm).

Carbon Load

For **Silica-based Reversed-Phase** packings, a carbon load percentage indicates the amount of functional bonded phase attached to the Silica-base material.

Lower amount of carbon load means that packings are more weakly hydrophobic, which may reduce retention times compared to phases with higher carbon load.

However, a higher carbon load will give higher capacity and often greater separation, especially for compounds of similar hydrophobicity.

Pore Size & Surface Area

Pore Size

Packing materials having smaller pore sizes have higher surface area and consequently a higher capacity than packings with larger pore sizes.

To maximize the interaction between the target molecules and the packing a correct choice of the Pore Size is critical. In general a 100Å material provide great results for small molecule analysis. For large molecules, such as Proteins and Peptides a 300Å media is typically used.

Surface Area

The Surface Area is the total available surface, most of which is inside the pores, for interaction with the target molecules.

Typically, Small pores means a larger surface area and Large pores means a smaller surface area.

Bonding

Most commercially available reverse phase HPLC packing materials are Monomeric or Polymeric bonded phases.

When a monofunctional alkylsilane reagent is used to prepare the packing material, the functional chains have a single attachment point to the silica media. These are called **Monomeric** bonded phases.

If di- or trifunctional alkylsilane reagents are used, the bonded phases have functional chains bound to the base silica particle at multiple attachment points and can involve cross-linking between chains.

These are called **Polymeric** bonded phases.

New high-purity silica phases are very stable, whether monomerically or polymerically bonded, however they differ in their selectivity.

Endcapping

After the bonding procedures to obtain Silica-based reversed-phase packings, a certain amount of residual free silanol groups can remain unreacted on the silica surface.

These groups will interact with polar compounds. Endcapping the bonded phase minimizes these secondary interactions.

Partial or Total endcapping procedures are used to reduce the residual silanols on the silica surface.

Higher endcapping means less interactions with polar compounds while non-endcapped phases mean enhanced polar selectivity, for stronger retention of polar organic compounds.

Endcapping

HPLC Columns Introduction

HPLC Analytical, Semi-Prep and Preparative Column Formats

Choosing the right column format is critical to obtain the best performance during your analysis or purification.

Analytical Columns Format

Column Length

When starting a new HPLC method development, the user has to consider the complexity of their sample and the desired run time, in order to find the best column length for their application.

Shorter column length provides faster run times and solvent saving. Usually smaller particle size media is used in shorter column which achieves good resolution in a shorter run time, however complex samples may still need longer columns, even when using smaller particle sizes.

Column Lengths Available	
20-30-50mm Column Length	Fast Separations Work best with 3 µm Particle Size
75-100-125-150mm Column Length	Standard & Hi-Resolution Separations Work best with 3-5 µm Particle Size
200-250-300mm Column Length	Standard & Hi-Resolution Separations Work best with 5-10 µm Particle Size

Replaceable Frit

In most well-known and popular HPLC Columns, when a backpressure increase occurs, whatever the reason, you have to replace the entire expensive column.

With all Sepachrom HPLC Columns you can replace the frit and significantly extend its lifetime.

Column I.D.

Smaller internal diameter columns provide better mass sensitivity, require smaller sample size injection, and reduce solvent consumption.

Wider internal diameter columns allow for larger sample sizes and minimize the negative effects of your system's dead volume due to the higher flowrates.

2.1mmID columns work best with a microbore flow cell at your detector and an internal loop injector otherwise you have to tolerate some loss in efficiency and resolution due to system dead volumes.

Analytical Column I.D. Available	
2.1mm Column I.D.	High Sensitivity and Low Sample Volume Best use with Microbore Cell and Internal Sample Loop Valve.
3.0mm Column I.D.	High Sensitivity and ideal to reduce solvent consumption Work with standard HPLC instrumentation
4.0mm Column I.D.	Standard Separations Work with standard HPLC instrumentation
4.6mm Column I.D.	Standard Separations Work with standard HPLC instrumentation

Full-Guard Cartridges

How can I best protect my HPLC column?

Full-Guard is the convenient protection system for your HPLC column and allows you to change the Guard Cartridge in seconds.

Select the suitable reusable Holder (In-Line or Direct Connect). They work with all Full-Guard Cartridges with following IDs :

2.1 - 3.0 - 4.0 - 4.6 mm ID

Full-Guard Holder	
CD0100	Full-Guard Holder - Direct Connection
CD0101	Full-Guard Prep Holder - In-Line Connection

Semi-Prep and Preparative Columns Format

Preparative Scale-Up

In Chromatography the objectives of Preparative chromatography differs from those of Analytical separations.

In Preparative chromatography Speed and Sensitivity are usually less important than Loading, Recovery and Product Purity.

Here the 6 common steps of Preparative Scale-Up method development :

Step 1 : Method Optimization

The Analytical method is optimized to achieve the maximum loadability through the adjustment of the mobile phase and packing selectivity.

Step.2 : Loading Study

This has to determine the capacity of the stationary phase. The sample loading also depends on the complexity of the mixture.

Step 3 : Mass Determination

The total mass to purify is used to balance the necessary throughput, purity and yield.

Step 4 : Scale-Up

The column size is calculated based on the output requirements.

D = diameter L = Length

$$\text{Load}_{prep} = \text{Load}_{analytical} \times \left(\frac{D_{prep}}{D_{analytical}} \right)^2 \times \frac{L_{prep}}{L_{analytical}}$$

Step 5 : Linear Velocity

When scaling-up, the mobile phase flow rate should be adjusted proportionally to the cross-sectional area of the column to maintain consistent linear velocity and retention times.

$$\text{Flow Rate}_{prep} = \text{Flow Rate}_{analytical} \times \left(\frac{D_{prep}}{D_{analytical}} \right)^2$$

Step 6 : Gradient

To get the resolution achieved on an analytical column while increasing column diameter, the gradient shape must be maintained by keeping the ratio of the gradient volume to the column volume constant.

Injection Load and Flow Rate Table		
Column I.D.	Load*	Flow Rate
4.6mm Column I.D.	X	1 mL/min
7.8mm Column I.D.	3X	2.88 mL/min
10mm Column I.D.	5X	4.73 mL/min
21.2mm Column I.D.	25X	21.2 mL/min
30mm Column I.D.	45X	42.5 mL/min
50mm Column I.D.	120X	118 mL/min
100mm Column I.D.	500X	473 mL/min

*The Load Injection values suggested in the above table refer to columns with same length.

Column Lengths & IDs

Our Preparative columns are available in the following lengths :
100mm - 150mm - 250mm
 and **7.8mm - 10mm - 21.2mm - 30mm & 50mm ID**

Semi-Prep and Preparative Column I.D. Available

7.8mm Column I.D.	Semi-Prep - Very Small quantity to purify. Sample loading 3x vs. Analytical column I.D. (4.6mmID)
10.0mm Column I.D.	Semi-Prep - Small quantity to purify. Sample loading 5x vs. Analytical column I.D. (4.6mmID)
21.2mm Column I.D.	Lab Scale Prep - Standard Purification Sample loading 25x vs. Analytical column I.D. (4.6mmID)
30 & 50mm Column I.D.	Preparative - High quantity to purify Sample loading 45x120x vs. Analytical column I.D. (4.6mmID)

Prep Full-Guard Cartridges

Often in a purification the sample contains undesirable molecules that can damage the Prep HPLC Column.

Expensive Preparative HPLC columns deserve the best protection.

Select the suitable reusable Holder according to the Prep Column I.D. and the correct Prep Guard Cartridges packed with the same material of the Prep Column.

Prep Guard Cartridges are available with **10mm** length and in

7.8mm - 10mm - 21.2mm - 30mm ID

Full-Guard Prep Holder

CX0120	Full-Guard Prep Holder for 7.8 & 10mm Column I.D.
CX0120	Full-Guard Prep Holder for 21.2mm Column I.D.
CX0120	Full-Guard Prep Holder for 30 & 50mm Column I.D.

Adamas® Ultra High Purity Silica Platform for HPLC

Adamas® is a media platform for analytical and preparative scale-up application based on Ultra High-Purity silica. The very low metal content ensures high stability, high performance and low bleed columns for high demanding applications.

Often, in a method development process and in an effort to improve sample throughput, users will run a “standard method” on a “standard single media; **Adamas®** has a wide range of chemistries, including five C18 phases, which ensure the maximum selectivity choice to achieve your best separation. A correct strategy will compare phases with complementary selectivity which gives confidence that one of them will produce the required separation. Resolution — that’s the key!

- **Better Peak Symmetry** : Ultra High-purity silica eliminates peak tailing problems
- **Long Column Life** : Exceptional column stability minimizes downtime and reduces cost
- **Ideal for Critical Analysis** : Low to no detectable column bleed
- **5 Selectivities of C18 Phases** : Optimizes retention, resolution, and analysis time

Adamas® C18 Selectivity

<ul style="list-style-type: none"> — Adamas® C18-Classic — Adamas® C18-Extreme — Adamas® C18-X-Bond — Adamas® C18-Select — Adamas® C18-AQ 	<p>The “Classic” C18 Column, 17% Carbon Load, fully End-capped, good resistance to alkaline pH, High Hydrophobicity due to the “brush-like” C18 chains distribution, Traditional Interaction.</p> <p>This phase is typically used in Extreme pH condition (pH 1-12) whilst still showing a good steric selectivity. The very low bleed ensures excellent MS compatibility even in acidic conditions.</p> <p>Proprietary bonding, (similar to Tri-art or Xbridge technologies). The very high steric selectivity and lower hydrophobicity results in an interesting alternative to the Classic C18. MS Compatible</p> <p>The fully exposed silanols (No End-capping) results in a high interaction with polar groups and is an excellent choice for polar compound separation.</p> <p>Long hydrocarbon chains can collapse when used in 100% aqueous conditions. Adamas® C18-AQ is fully compatible with 100% aqueous mobile phase due to a double functional group. 11% Carbon Load.</p>

Selectivity of 4 **Adamas®** C18 columns : C18-Classic, C18-X-Bond, C18-Extreme and C18-Select

Adamas® - Silica Specifications		
Material	Ultra High Purity Spherical Silica	
Porosity	100Å	
Surface Area	310 m ² /g	
Area	0.80 mL/g	
Particle Size	3µ - 5µ - 7µ - 10µ - 15µ	
Metal Content		Typical
	Na, Mg, Al, Ca, Fe, Zr	< 1mg/kg

Adamas® C18-Classic

Reversed-Phase HPLC Columns

- Monomeric Bonding Fully End-capped
- High Hydrophobicity Phase
- USP L-Code : L1

The "Brush-Like" C18 chains distribution.

C18 hydrocarbon chains are linked to the surface silica silanols. A very common bonding is named "brush-like" because the long C18 chains look like bristles on a brush. This type of bonding enhances the hydrophobic interactions.

We are committed to providing you the High-Quality HPLC columns and technical support. Each **Adamas®** HPLC column is individually tested under our strictly QC Test parameters prior to shipment. All our HPLC columns are fully guaranteed for best performance.

Anilines

Column : **Adamas®** C18-Classic - 5µ
 Stock N# : **AD0050**
 Dimension : 250mm x 4.6mm ID
 Mobile Phase : 60% 50mM Phosphate buffer
 : 40% Acetonitrile
 Flow Rate : 1 mL/min
 Detector : UV at 254nm

- Sample
1. Aniline
 2. N,N-Diethylaniline
 3. N,N-Dimethylaniline

Aromatic Acids

Column : **Adamas®** C18-Classic - 5µ
 Stock N# : **AD0048**
 Dimension : 150mm x 4.6mm ID
 Mobile Phase : 60% 50mM Phosphate buffer
 : 40% Methanol
 Flow Rate : 1 mL/min
 Detector : UV at 254nm

- Sample
1. Vanilmandelic Acid (VMA)
 2. Homovanillic Acid (HVA)
 3. Vanillic Acid
 4. Salicylic Acid
 5. Benzoic Acid

Adamas® C18-Extreme

Reversed-Phase HPLC Columns

- Excellent Performance, compatible with Extreme pH Conditions (1-12)
- Good Steric Selectivity - MS Compatible
- USP L-Code : L1

Ordering Information

Full-Guard System

Sepachrom **Full-Guard** system is designed to fully protect your column.

Replacing the Guard Cartridge is easy and takes just a few seconds.

The holder is reusable and works with all analytical I.D. columns (2.1-3.0-4.0-4.6mm IDs).

Direct Connection
(Part.No CD0101)

In-Line Connection
(Part.No CD0100)

* 3/pkg - **Full-Guard Cartridges** require **Full-Guard Holder**. Two versions available :
Full-Guard Holder - **Direct Connection** - Part.No **CD0100** / **In-Line Connection** - Part.No **CD0101**

Parabens Mixture

Column : Adamas® C18-Extreme

Ethyl-p-hydroxybenzoate

Butyl-p-hydroxybenzoate

Methyl-p-hydroxybenzoate

Stock N# : AD0121
Particle size : 3µm
Length/ID : 50mm x 4.6mm
Flow Rate : 1 mL/min
Detector : UV 254nm
Injection : 5µL

Acidic Conditions

Mobile Phase A : 0.1% TFA / Acetonitrile (95:5)
Mobile Phase B : H₂O / Acetonitrile (5:95)

Gradient : A/B (90:10) to (10:90) in 5 min
: A/B (10:90) to (0:100) in 0.1 min

Basic Conditions

Mobile Phase A : 0.05% NH₃ / Acetonitrile (95:5)
Mobile Phase B : H₂O / Acetonitrile (5:95)

Gradient : A/B (90:10) to (10:90) in 5 min
: A/B (10:90) to (0:100) in 0.1 min

Adamas® C18-X-Bond

Reversed-Phase HPLC Columns

- Proprietary Bonding - Very High Steric Selectivity
- MS Compatible - Low Bleeding in Acidic Condition
- USP L-Code : L1

Ordering Information

Polymeric Bonding.

In the vertically polymerized stationary phase, the trichloro-silane derivatization results in a very complex cross-linked surface, including multiple layers.

* 3/pkg - Full-Guard Cartridges require Full-Guard Holder. Two versions available :
Full-Guard Holder - Direct Connection - Part.No CD0100 / In-Line Connection - Part.No CD0101

Steric Selectivity & Bonding Technology

There are many factors that influence the performance of a high performance liquid chromatography (HPLC) stationary phase. Steric selectivity means the phase's ability to separate planar structures (triphenylene) and those with stereo spatial volume (o-terphenyl).

Our proprietary bonding provides a higher steric selectivity compared to monomeric bonded phases. The steric selectivity of a column also depends on the solvent strength.

Why do we want to characterize column selectivity? Mainly to choose a column of very different selectivity.

In method development there is sometimes the need to change selectivity in order to separate overlapping peaks.

Steric Selectivity

Test operative conditions:

Column 1 (Green) : Adamas® C18-Classic
Column 2 (Red) : Adamas® C18-X-Bond

Particle size : 5μ
Length : 150mm
ID : 4.6mm
Flow Rate : 1 mL/min
Detector : UV 254nm

Triphenylene

o-Terphenyl

Adamas® C18-Select

Reversed-Phase HPLC Columns

- Monomeric Bonding and NO End-capping (Leaving Free Surface Silanols)
- Ideal for Polar Compounds and Vitamin Analysis
- USP L-Code : L1

Just Wondering

Adamas is a word of ancient Greek origin (ἀδάμας) and later Latin (ādāmās). The meaning of Adamas is **Invincible** and **Unyielding** - like a **Diamond**.

Diamonds are well known for their **hardness** and **purity**, which are the characteristics that distinguishes our HPLC Media.

Point of Interest :

Although new resources for diamonds are being explored and discovered, the supply of these gems remains limited.

This is understandable once you learn that more than 250 tons of ore need to be blasted, crushed and processed to yield just one carat of rough diamond. Further, only 20 percent of all rough diamonds are suitable for gem cutting.

Clarity is an indication of a diamond's purity. Clarity is determined by a diamond's naturally occurring internal characteristics. These characteristics are sometimes not visible to the naked eye and they are what make each diamond unique.

The characteristics, or inclusions, may look like crystals, feathers, clouds or dark spots and the quantity, size, and location of these inclusions does have an effect on a diamond's value. Diamonds with fewer and smaller inclusions are generally more brilliant, assuming that the colour and cut are the same.

A diamond purity is graded by its relative departure from "flawless"-- the complete absence of inclusions under 10x magnification.

Less than 1% of all diamonds ever found have had no inclusions and can be called flawless (FL) without any inclusions.

Adamas® C18-AQ

Reversed-Phase HPLC Columns

- Hydrophilic Surface C18 Phase
- Compatible with 100% Aqueous Mobile Phase
- For Polar Compounds and Vitamins
- USP L-Code : L1

Water Stress Test

With most common C18 HPLC phases, a minimum percentage of organic solvent in the mobile phase is necessary to avoid the collapse of the hydrocarbon chains. This phenomenon is irreversible, so the performance of the column is then compromised. Sepachrom Adamas® C18-AQ surface chemistry is designed to work in 100% aqueous conditions without compromising the efficiency and performance of the column.

Adamas® C18-AQ selectivity is strongly influenced by the % of aqueous content; >80% of water will result in higher retention of polar compounds. With <50% of water content the reversed phase influence will increase and the column will perform as a RP phase with low carbon load.

Adamas® - HPLC Columns - Reversed Phase

Adamas® C8

Reversed-Phase HPLC Columns

- Polymeric Bonding and End-capped.
- Carbon Load : 9.5%
- Less Hydrophobic than C18 Phases.
- USP L-Code : L7

Hydrophilic Interaction Chromatography HILIC

Hydrophilic Interaction Chromatography (HILIC) is a technique used to separate polar or ionic compounds. HILIC uses polar stationary phases and organic mobile phases as normally used in Normal Phase Chromatography (NP). When a polar stationary phase is used with a mobile phase high in organic concentration, the water (more polar) will adsorb on the surface creating a semi-stagnant, water-rich stationary phase and a water depleted mobile phase. Polar analytes can then partition in to aqueous-enriched phase and can undergo ionic cation exchange interaction with silanol groups. This will enhance the retention of polar compounds and results in their high loading capacities.

Adamas® HILIC media has bipolar functional groups, covalently bonded on to the silica surface and can be used for separation and large scale purification of a wide range of hydrophilic compounds.

Retention vs. Mobile Phases

Column : Adamas® HILIC 5µ
Part. No : AD0570
Length/ID : 250mm x 4.6mm
Flow Rate : 1 mL/min
Detector : UV254nm

Organic Acids

1 : Toluene
2 : Sorbic Acid
3 : Benzoic Acid
4 : Naphtoic Acid

Column : Adamas® HILIC 5µ
Part. No : AD0570
Length/ID : 250mm x 4.6mm
Mobile Phase : Acetonitrile/Water 98:02
Flow Rate : 1 mL/min
Detector : UV254nm

Nucleosides

1 : Toluene
2 : Deoxyadenosine
3 : Adenosine
4 : Adenine

Column : Adamas® HILIC 5µ
Part. No : AD0570
Length/ID : 250mm x 4.6mm
Mobile Phase : Acetonitrile/Water 90:10
Flow Rate : 1 mL/min
Detector : UV254nm

Sepa-Bulk - Silica Gel for Chromatography

SepaChrom offers a complete line of **100Å Spherical Silica Gel** media used in many applications, including **Laboratory and Industrial scale Purification**.

Sepa-Bulk is available in a wide range of **Particle Sizes** :

- 10µm & 15µm for Preparative HPLC,
- 20-45µm for Preparative LC
- 40-75µm for Flash Chromatography
- 75-200µm for Industrial Scale Purification.

To complete the product line **Sepa-Bulk** is available with a wide range of **Porosities**, including 70Å, 150Å, 200Å, 300Å, 500Å, 800Å and 1000Å.

Functionalization	Porosity (Å)	Particle Size (µm)	Description	Packaging (kg)	Stock N#	Applications
Silica	100Å	10 µm	Sepa-Bulk Silica	1kg	FF0001	Preparative Chromatography
Silica	100Å	15 µm	Sepa-Bulk Silica	1kg	FF0002	
Silica	100Å	20-45 µm	Sepa-Bulk Silica	1kg	FF0003	Preparative & Flash Chromatography
Silica	100Å	20-45 µm	Sepa-Bulk Silica	10kg	FF0004	
Silica	100Å	20-45 µm	Sepa-Bulk Silica	20kg	FF0005	
Silica	100Å	40-75 µm	Sepa-Bulk Silica	1kg	FF0006	Flash Chromatography
Silica	100Å	40-75 µm	Sepa-Bulk Silica	10kg	FF0007	
Silica	100Å	40-75 µm	Sepa-Bulk Silica	20kg	FF0008	Industrial Scale Purification
Silica	100Å	75-200 µm	Sepa-Bulk Silica	1kg	FF0009	
Silica	100Å	75-200 µm	Sepa-Bulk Silica	10kg	FF0010	
Silica	100Å	75-200 µm	Sepa-Bulk Silica	20kg	FF0011	Industrial Scale Purification
C18	100Å	10 µm	Sepa-Bulk C18	250g	FF0012	
C18	100Å	10 µm	Sepa-Bulk C18	1kg	FF0013	Preparative Chromatography
C18	100Å	15 µm	Sepa-Bulk C18	250g	FF0014	
C18	100Å	15 µm	Sepa-Bulk C18	1kg	FF0015	Preparative & Flash Chromatography
C18	100Å	20-45 µm	Sepa-Bulk C18	1kg	FF0022	
C18	100Å	20-45 µm	Sepa-Bulk C18	10kg	FF0016	
C18	100Å	40-75 µm	Sepa-Bulk C18	1kg	FF0017	Flash Chromatography
C18	100Å	40-75 µm	Sepa-Bulk C18	10kg	FF0018	
C18	100Å	75-200 µm	Sepa-Bulk C18	1kg	FF0019	Industrial Scale Purification
C18	100Å	75-200 µm	Sepa-Bulk C18	10kg	FF0020	
C18	100Å	75-200 µm	Sepa-Bulk C18	20kg	FF0021	

Sepa-Bulk product lines include a wide range of **bonded media** to meet any purification challenge from **Laboratory to Industrial** scale.

Packaging is available from 100g to multi-ton for laboratory to process scale applications.

Packing	Porosity	Particle Size
C18	70Å-150Å-200Å-300Å-500Å-800Å-1000Å	10µ - 15µ - 20/45µ - 40/75µ - 75/200µ

Are you looking for a **Preparative or Process Scale Column or Chromatographic System?**

SepaChrom offers a complete line of Stainless Steel Low-Medium & High Pressure columns (up to 2m ID - 100bar) and systems (up to 5000 l/hr flow rate) for **Laboratory and Industrial scale Purification**.

Company Profile

About us :

SepaChrom is a new company specialising in **Chromatography**. **SepaChrom** is the brainchild of the founders who wanted to create a dedicated and unique company able to support **Chromatography Users** in optimizing their separation challenges.

Our Core competence is the manufacture, sale and support of **High-Quality** products for **GC, Analytical and Preparative** scale **HPLC** and **Flash** purification, including consumables and accessories, through to **Process** scale purification.

Our Mission :

Our team has decades of experience, which, combined with a range of High Quality selected products and the most efficient technological solutions, allows **SepaChrom** to support Pharma, Biotech, Chemical, Food and Beverage, Cosmetic, Environmental, Clinical and Petrochemical industries, in R&D departments as well in QC laboratories and Production. Our commitment is to provide the Highest level of Technical Support that Chromatographers expect from **Your Specialist in Chromatography**

Customers in Mind :

The success of **SepaChrom** is driven by the complete **satisfaction** of our customers, and consequently by their success.

SepaChrom's expertise results in High-Quality **pre & post** sale support to Chromatographic Users. This includes **fast delivery** of products from our warehouse to your location.
