

# Solid Phase Extraction Application notebook

# For Milk analyses

Q4 2013

#### INTRODUCTION

POLYINTELL offers a comprehensive range of sorbents for the challenging fields of sample preparation, sample clean-up, extraction and purification, from conventional SPE products (AttractSPE<sup>TM</sup> polymeric sorbents, SilactSPE silica based-sorbents) for a crude clean-up to the most innovative SPE for specific application (AFFINIMIP<sup>®</sup>SPE, a Molecularly Imprinted Polymers (MIP) based sorbents).

In addition, the experience of POLYINTELL is continuously enriched with customer interactions and an endless analytical development for new applications. This experience is sometimes communicated through Application notes (available on website and via newsletters).

To make you enjoy of this background and for an wealthy, very instructive and easily-accessed overview of AFFINIMIP<sup>®</sup>SPE and AttractSPE<sup>TM</sup> performances, we are pleased to introduce you this Application Notebook which collects a good abstract of POLYINTELL's experience on AFFINIMIP<sup>®</sup>SPE and AttractSPE<sup>TM</sup>.

For your convenience, this application notebook will be permanently updated with new protocols and results. Please regularly visit our website <u>www.polyintell.com</u> for the latest version of the Application Notebook.

This Application notebook will be an essential tool to address your technical issues.

#### **TECHNICAL SUPPORT**

POLYINTELL has fully integrated technologies platform with specialized teams in organic chemistry, polymer chemistry, analytical and bioanalytical chemistry who are at your disposal to guide you in your challenges.

At POLYINTELL, we are committed to providing the best technical support possible. Our Technical Support Group is a team of highly qualified M.Sc. and PhD Chemists, who are at your disposal to resolve your problem and to answer to your queries. For technical inquiries, feel free to contact us either by email: tech.support@polyintell.com, or by phone at: +33 (0)2 32 09 32 70.

We are also very thankful to customer's feedback about our products, protocols and customer services by email to: contact@polyintell.com

#### **QUALITY POLICY**

To develop a long term and durable partnership with its customers, POLYINTELL ensures the best quality of its products and services.

As an ISO9001:2008 certified company, POLYINTELL has implemented Quality management system requirements to show its commitment to quality, customers, and a willingness to work towards improving efficiency.

In addition, to ensure the best quality of its products, the performance is checked by following several QC tests according to each product's quality control procedure. After passing all these tests, the products receive a certificate of analysis which proved the compliance with the defined criterion.

# **APPLICATIONS available for MILK analyses**

Milk is a very complex matrix which requires well suited sample preparation to monitor the presence of mycotoxins or chemical contaminants in order to prevent adulteration or health risks for the consumer.

This specific application notebook contains a wide range of applications for MILK matrices.

# AFFINIMIP<sup>®</sup> SPE Bisphenol A

## **DETERMINATION OF BISPHENOL A IN LIQUID INFANT FORMULA**

**Regulations for Bisphenol A:** 

Europe (directive 2011/8/EU) : forbiden in infant feeding bottles

#### **PROTOCOL OF PURIFICATION**

Sample preparation

#### Purification with a 3mL/100mg AFFINIMIP<sup>®</sup> SPE Bisphenol A cartridge

#### **Equilibration**

- 5mL Methanol -2% Acetic Acid
- •5mL Acetonitrile
- 5mL Water

#### Loading

Up to 15mL of infant formula

Washing of interferents

•10mL Water

- •6mL Water/Acetonitrile (60/40)
- **Drying 30 seconds**

#### **Elution (E)**

3mL Methanol

The elution fraction was then evaporated and dissolved in the mobile phase before HPLC analysis.

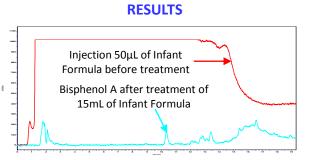

#### **HPLC Method with Fluorescence detection**

Column: Hypersil Gold C18 column 150mm x 4.6mm Mobile phase: gradient profile

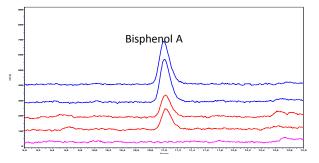

Time (min)	% water	% ACN
0	65	35
2	65	35
12	50	50
20	50	50
20.5	65	35
35	65	35

Flow rate: 1mL/min Fluorescence detection: wavelengths: 230 / 315nm Injection volume: 50µL.

excitation/emission

Chromatograms of Infant Formula containing  $1\mu g/L$  of Bisphenol A before clean-up (Red) and after clean-up (Blue) with AFFINIMIP<sup>®</sup> SPE Bisphenol A.

Chromatograms obtained after clean-up with AFFINIMIP<sup>\*</sup> SPE Bisphenol A of 15mL of Infant Formula spiked with Bisphenol A at  $2\mu g/L$  (tested twice, blue) or at  $1\mu g/L$  (tested twice, red) or not spiked (pink).

Recovery of Bisphenol A in 15mL of infant formula after AFFINIMIP<sup>®</sup> SPE Bisphenol A clean-up and relative standard deviation calculated from results generated:

- under **repeatability** conditions (n=3, % RSD<sub>r</sub>)

С° (µg/L)	Mean (µg/L)	Recoveries %	% RSD <sub>r</sub>
1.0	0.9	88.4	1.5
2.0	1.7	85.7	2.7

- under reproducibility conditions ( % RSDR).

С° (µg/L)	Mean (µg/L)	Recoveries %	% RSD <sub>R</sub>
1.0	0.8	84.4	7.4
2.0	1.7	85.8	5.3

3mL-100mg sorbent in a PP cartridge FS106-02 for 25 cartridges FS106-03 for 50 cartridges 6mL-100mg sorbent in a glass cartridge FS106-02G for 25 cartridges FS106-03G for 50 cartridges Link to AFFINIMIP® SPE Bisphenol A

# AFFINIMIP<sup>®</sup> SPE Bisphenol A DETERMINATION OF BISPHENOL A IN POWDERED INFANT FORMULA

#### **Regulations for Bisphenol A:**

Europe (directive 2011/8/EU) : forbiden in infant feeding bottles

#### **PROTOCOL OF PURIFICATION**

#### Sample preparation

4.4g powdered infant milk was reconstituted in 30 mL of water and warmed up at ~ 50°C during 20 seconds using microwaves. Then 20 mL of acetonitrile were added to 20 mL of warm milk and centrifuged at 4000 rpm during 10 minutes. The supernatant was collected and filtered on filter paper (4-7 $\mu$ m). This extract was diluted 1:1 with water to form the loading solution.

#### Purification with a 3mL/100mg AFFINIMIP<sup>®</sup> SPE Bisphenol A cartridge

#### Equilibration

- •5mL Methanol -2% Acetic Acid
- •5mL Acetonitrile
- •5mL Water

#### Loading

Up to 40mL of infant formula

#### Washing of interferents

- •10mL Water
- •6mL Water/Acetonitrile (60/40)
- Drying 30 seconds

### Elution (E)

3mL Methanol

The elution fraction was then evaporated and dissolved in the mobile phase before HPLC analysis.

#### **HPLC Method with Fluorescence detection**

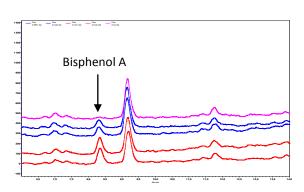

Column: Hypersil Gold C18 column 150mm x 4.6mm Mobile phase: gradient profile

# **AFFINIMIP<sup>®</sup> SPE Tetracyclines**

### **DETERMINATION OF TETRACYCLINES IN MILK**

UMM

#### **Regulations for Tetracyclines:**

Codex Alimentarius: 100µg/L sheep or cattle milk (26<sup>th</sup> CAC session, 2003)

#### **PROTOCOL OF PURIFICATION**

#### Sample preparation

1.5mL of Milk were mixed with 6mL of EDTA/Mc Ilvaine's Buffer and the mixture was centrifuged at 4000rpm for 10 minutes at a temperature below  $15^{\circ}$ C. The supernatant was collected and 750µL of a 1N NaOH solution was added and the solution was then adjusted to pH 10 with a NaOH solution (this mixture was the loading solution).

#### Purification with a 1mL/10mg AFFINIMIP<sup>®</sup> SPE Tetracyclines cartridge

#### Equilibration

- •1mL Acetonitrile
- •1mL Water

#### Loading

Load the loading solution (7.5mL) Washing of interferents

•2mL Water/Acetonitrile (60/40)

#### Drying 3 minutes

#### Elution (E)

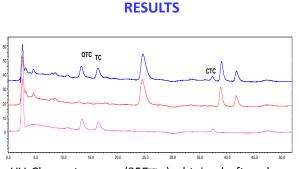

2mL Methanol with 2% Formic acid The elution fraction was then evaporated and dissolved in the mobile phase before HPLC analysis.

#### **HPLC Method with UV detection**

Column: Hypersil Gold C18 column 150mm x 2.1mm, 3µm Mobile phase: gradient profile

Time (min)	% 10mM Oxalic Acid Water	% 10mM Oxalic Acid ACN	% MeOH

# **SPE ACCESSORIES**

POLYINTELL proposes the complete set of equipments required to carry out SPE experiments:

	u
anit	anifol

ACC-MAN1 Like all chromatography techniques, Use of SPE cartridges needs a precise control of flow rate for maintaining reproducible extractions. Solid Phase extraction Vacuum Manifold allows you to control the flow and to process up to 12 (12-port version) or 24 (24-port version) AFFINIMIP<sup>®</sup> SPE samples simultaneously, to gain significantly time during sample preparation steps.

SPE Adapter & Reservoir kit

ACC-AR1 Tube adapters serve to pile one SPE tube on top of another to provide different selectivities. A larger empty syringe barrel can be stacked on top of a smaller SPE tube to act as a larger load reservoir. Or, they can serve as an adapter for positive pressure methods (e.g. from a syringe or air/ N2 line).

Mini-Vap

The 6-Port Mini-Vap concentrator/evaporator processes six vials at one time. The Mini-Vap includes a needle valve for fine metering of air or nitroge n drying gas.

Mini PUMP	ACC-PUMP	<ul> <li>Mini diaphragm vacuum pump for solid phase extraction experiments</li> <li>Portable</li> <li>&gt;5.5L/min</li> <li>&gt;~120 torr vacuum</li> <li>&gt;Oil-free</li> <li>&gt; portable</li> </ul>		
Vacuum pump trap	ACC-TRAP	SPE Vacuum pump trap kit Installed between the manifold and the vacuum pump, it collects		
		all liquids that are aspirated preventing contamination of vacuum pump with a capacity of 1L.

POLYINTELL offers full services for the design and synthesis of polymers complying with your specifications.

With fully integrated technology platforms in organic, polymer and analytical chemistry, POLYINTELL has been partner in more than 40 projects and helps its customers by innovative solutions for their complexes challenges.

POLYINTELL has developed a library of monomers giving a family of selective stationary phases based on its proprietary technology, which have shown a strong potential for the extraction, purification and detection of various compounds.

#### Did you know ?

Molecularly imprinted polymer (MIP) is a polymer with a «memory» of the shape and the functional groups of a target molecule. This material is designed in order to recognize selectively this molecule, even in the presence of compounds with structure and functionality similar to those of this molecule. High molecular recognition properties can be achieved with these MIPs for a variety of molecules and can be useful for its extraction, purification and detection.

### Why trusting POLYINTELL?

#### **POLYINTELL** supplies

- The most comprehensive bank of sorbents
  - From Silica to Polymers
  - From conventional to very selective
  - Reversed-phase, ionic exchange, MIPs etc...
- •Our Expertise on MIP, sample preparation, SPE protocol and detection kit development
- Quick and efficient development
- Reactivity

### **PROJECT DEVELOPMENT**

No matter if we run a short term project (2-3 days) or long term project (4 to 6 months) we always follow a well-established procedure. The following scheme describes an example of a procedure for the development of a custom-made product based on our customer's requirements.

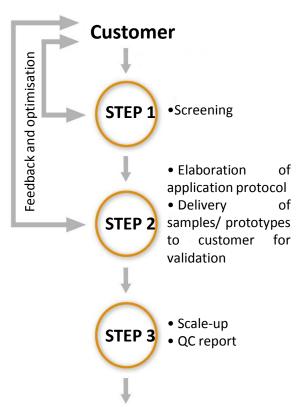

After signing of Confidential Disclosure Agreements (CDA), key data are exchanged. A quotation based on our experience in separation science including a process sheet is developed. During the whole procedure, a permanent feedback is established with you.

**Step 1:** We offer you a screening of our library which consists of several hundreds POLYINTELL phases to find the suitable one for your separation problem. The knowledge of the structure of the target substance, its functional groups and the solubility data give us valuable hints for the choice of the screening phases.

**Step 2:** For the selected phase, a protocol is implemented for your application. Then samples and / or prototypes are delivered to you for testing, evaluation and validation.

**Step 3:** When the selected phase suits your application and has been validated, a scale-up is planned. A QC report is delivered with the product. The format of the product is correlated to your application and can be bulk material, SPE cartridges, HPLC columns etc...

# Procedure for custom-made polymer phase

Bulk material, SPE cartridges or HPLC columns

If you need the development of new polymer for your application, please send us an email to <u>contact@polyintell.com</u> or describe your needs using <u>http://www.polyintell.com/services/request-service-online/</u>. You can describe your application and our scientists will shortly evaluate your queries before contacting you as soon as possible.

# About POLYINTELL

Founded in 2004, **POLYINTELL is a worldwide leader in the design and the development of intelligent polymers.** Pioneer in Molecularly Imprinted Polymers (MIP) and expert in polymer chemistry, POLYINTELL develops, manufactures and markets innovative solutions for sample preparation, selective extraction, purification and detection of specific target analytes.

Our mission is to develop and market innovative products of high value to customers by a practical contribution to their work. By offering you a most comprehensive range of solid phase extraction products, AFFINIMIP<sup>®</sup> SPE products based on molecularly imprinted polymers, AttractSPE<sup>™</sup> a range of polymeric phases and Silica based products, associated reagents and small equipment, the analytical chemists can find any solution for sample preparation, selective extraction, sample clean-up and purification needs in various sectors: food safety, pharmaceutical industry, clinical diagnosis, environment and doping. we are your partner of your choice.

Furthermore, by exploiting our library of innovative polymers and our know-how in chromatography and solid phase extraction, we have a strong capacity to adapt these polymers to meet any specific requirements and to solve unsatisfied purification and extraction needs.

# **ORDERING INFORMATION**
